Subject: Monitoring well abandonment report for your Keyspan Britewaters site

Dear Mr. Ferguson:

As per your request, a total of five (5) monitoring wells (2) 4" wells approximately 45' in depth, (1) 4" well approximately 18' in depth, and (2) 2" wells approximately 17' in depth located at your Keyspan site in Britewaters, NY were properly abandoned on May 7<sup>th</sup>, 2004 according to NYSDEC specifications.

On all wells the screened zone of each well was backfilled with clean sand. A bentonite seal was placed over the sand backfill and each well was grouted to top of casing with a neat cement/bentonite grout. Each well had a Sch 40 PVC dome cap solvent welded onto the casing. The two inch wells had a cement cap poured over the dome cap and then manholes closed, the 4" wells in standpipes were relocked and left in place. All work was performed by a certified well driller and helper. Our NY State Registration number is NYRD01469 and expires March 31, 2005.

If you should have any questions or comments concerning either this correspondence or the work performed at the site, please do not hesitate to call and I will be happy to be of assistance.

Sincerely yours,

A handwritten signature in black ink, appearing to read 'J. M. Lamprecht', written in a cursive style.
